## BNX EVENT MONITORING

# BNX Event Monitoring

BNX Monitoring by Events is our automatic alarm system, is based on events (checkpoints), which monitors transfers or routes based on geo-fences that represent a control area in a predefined route, that notify the person in charge of monitoring units on delays, unauthorized stops or diversions that allow you to take appropriate action.
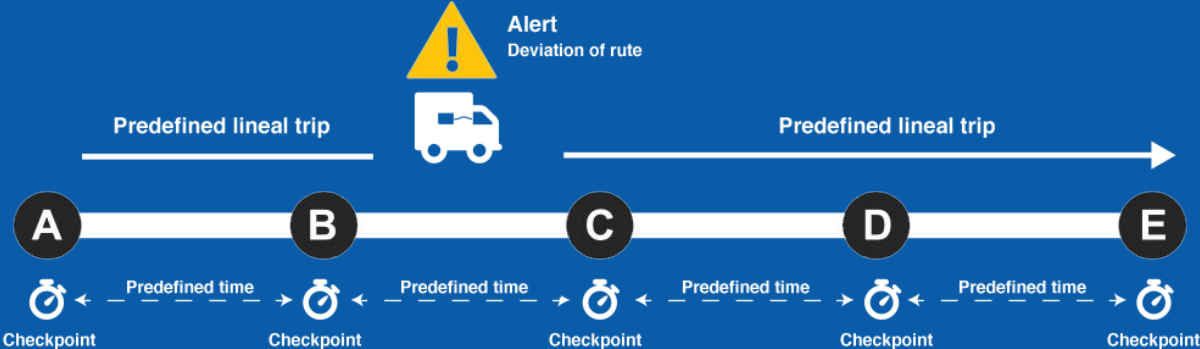

# Benefits

✓ Increased security- identification incidents
✓ Improved control of delivery time
✓ Improved logistics

# How dose it work?

A linear path is defined in the system to register a vehicle on a trip equipped with a GPS unit. The administrator generates checkpoints with Geo-fences where time, routes and stops is defined.

**Alert**
Deviation of rute
